

Your GBW model overlaid with Mäntysaari and Schenke Figure 1

$\gamma p \rightarrow J/\psi + p$ or Y | $W = 100$ GeV | $Q^2 = 0$ | absolute normalization, no fit

GBW: existing JPSI_HS, Gaus-LC overlap, midpoint phase, forward Rg; no real-part factor.

Paper: published IPsat curves with boosted Gaussian overlap and its corrections; bands are paper statistics.

Source: arXiv:1603.04349v2, Fig. 1 (vector-path extraction). Theory comparison only; no HERA points redigitized.
